DETAILED ACTION

Reassignment Affecting Application Location

1. The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 2617.

Response to Arguments

2. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn. However, upon further consideration, a new ground(s) of rejection is made as set forth below.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-3, 7, 10-13-16, 18, 21, 23 and 24 are rejected under 35 U.S.C. 102(e) as being anticipated by Kangas et al (Kangas), U.S. Patent No. 6,356,763.

Regarding claims 1-3, 7, 10-13-16, 18, 21, 23 and 24, Kangas discloses a method for locating a mobile station comprising receiving a plurality of simulcast signals

Art Unit: 2617

from respective base stations; determining relative time of arrival information for the received plurality of simulcast signals and determining the position of the mobile station (col. 1, lines 42-57, col. 6, lines 35-61; figure 2).

Kangas discloses the transmission and reception of base station identification information that is used in determining the time of arrival of simulcast signals from a plurality of base stations (col. 2, lines 43-51). Kangas further discloses transmitting mobile location information from the mobile station (via output device 66) to a server (MLC) via a base station (col. 10, lines 18-28; figure 6). See also col. 7, lines 38-50, col. 8, line 56-col. 9, line 16 and col. 9, line 44-col. 27).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 4-6, 8, 9, 19, 20, 22 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kangas in view of well-known prior art.

Regarding claims 4-6, 19, 20, 22 and 25, Kangas discloses the method of locating a mobile station as described above. Kangas further discloses using a frequency response to obtain time of arrival and wherein location information is transmitted in the system (col. 9, lines 41-64, col. 10, lines 18-27). Kangas, however, fails to disclose wherein the simulcast uses OFDM modulation.

The examiner contends, however, that OFDM modulation is very well-known and widely used in cellular systems. Therefore at the time of invention, it would have been obvious to a person of ordinary skill in the art to modify Kangas with the teachings of well-known prior art for the purpose of reducing the impact of interference.

Regarding claims 8 and 9, Kangas discloses the method of locating a mobile station as described above. Kangas, however, fails to disclose the various techniques of locating a mobile station such as using GPS and Doppler Shift.

The examiner contends, however, that such techniques are very well-known in the art and the examiner takes official notice as such. At the time of invention, it would have been obvious to a person of ordinary skill in the art to modify Kangas with the teachings of well-known prior art to perhaps improve the accuracy of locating a mobile station in an emergency situation.

7. Claims 17, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kangas in view of Oren et al (Oren), U.S. Patent No. 6,725,045.

Regarding claims 17, 26 and 27, Kangas discloses the method of locating a mobile as described above. Kangas, however, fails to disclose broadcasting location-specific advertisements/location specific information to mobile stations from base stations.

In a similar field endeavor, Oren discloses broadcasting location-specific advertisements/information to mobile stations via gateways (base stations) (col. 4,lines 8-13).

Application/Control Number: 09/924,022 Page 5

Art Unit: 2617

At the time of the invention it would have been obvious to one of ordinary skill in the art to modify Kangas with the teachings of Oren in order to notify mobile units of advertisements the mobile user may be interested in.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Temica M. Beamer whose telephone number is (571) 272-7797. The examiner can normally be reached on Monday-Thursday (alternate Fridays) 7:00am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marsha Banks-Harold can be reached on (571) 272-7905. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
